

Oil to LPG. Switch to the smarter choice

Switch to the smarter choice.

Save your money and cut your emissions

If you're currently using oil (kerosene, gas oil or HFO) for heating or in your production process, you could save a fortune by switching to LPG with AvantiGas and cut your carbon emissions at the same time.

Oil - the disadvantages

Oil is expensive

Oil is dirty

Oil is toxic

Oil is harmful to the environment

Oil can be easily stolen

LPG - the benefits

Better for the environment

- ✓ LPG emits 12% less CO₂ than oil, contains less sulphur and emits fewer toxic particles (Source: UKLPG)
- ✓ An LPG boiler runs for longer than an oil boiler on a similar quantity of fuel
- ✓ Easy to transport and store
- ✓ LPG tanks can be placed in remote areas or underground for aesthetic purposes

Better for business

- ✓ LPG is consistently cheaper than oil
- ✓ Fix pricing for extended periods rather than having to pay spot prices like oil
- ✓ Price stability and security of supply
- ✓ Lower running costs – an LPG boiler needs less maintenance than an oil boiler

Safe and secure

- ✓ LPG tank maintenance and servicing is AvantiGas' responsibility not yours
- ✓ LPG cannot be stolen unlike oil

Switching to LPG couldn't be easier!

We'll work with you to understand your unique energy requirements and to specify the right solution based on your demand, budget and environmental agenda – whether you're installing a brand-new boiler and fuel solution or converting from an inefficient oil boiler.

Switch to the smarter choice in 5 easy steps...

You get in touch

We conduct a site survey and energy efficiency review

We specify and install tanks, boilers/burners and pipework

We deliver fuel

You start saving money!

Financing options with no upfront costs – find out how much you could save!

We offer a free evaluation and site survey and we can even offer you financing options for a new asset installation with no upfront fees. We are using our own capital, so you can be sure that we're in it for the long term.

Boiler house and fuel storage – engineering experience and capabilities

We work with recognised boiler and burner manufacturers. You won't have to worry about a thing as our experienced in-house engineering team offers comprehensive project design and management services.

Environmental benefits – achieve your carbon targets

In addition to the clear financial benefits, there are also significant environmental benefits with LPG. LPG emits 35% less CO₂ than coal, 12% less than oil, and emits almost no black carbon, a major contributor to global warming (source: UKLPG). It also does not harm water or pollute soil.
