

Energy Saving Tips

At AvantiGas we're always looking for ways to help you save energy and money, whilst still keeping you warm and ready for the winter months.

So here's some top tips to get you winter ready...

Look after your boiler

Get it checked regularly by a Gas Safe Registered Engineer, and keep it in tip-top condition.

Shut out the draught

Check your doors and windows for draughts and fit draught proof strips if you need to.

Keep an eye on your thermostat

Turn it down by just 1°C and you could knock up to 10% off your heating bills.

Switch off, don't standby

Turn off your appliances instead of leaving them on standby and save around £90 a year.

Change to low energy light bulbs

They use 80% less electricity than traditionals and last longer too.

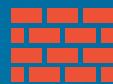

Choose energy efficient appliances

Look out for A-rate appliances or ones with the Energy Saving Trust Recommended label.

Get resourceful with your radiators

Put silver foil behind your radiators to reflect heat back into room. Installing shelves above them will help do this too.

Keep the warmth in your walls

Reduce the amount of heat escaping from your home, by installing external or cavity wall insulation.

Update your Gauge reading

Submit a gauge reading every month, this can help you keep track of your energy use, and also means we will be ready to deliver when you need it most.

Time to renew?

Get in touch when its time to renew your LPG contract, we are always updating our offers with the most competitive price.

Need any other advice or support?

If there's anything else you need this winter, you're sure to find it either on our informative, easy-to-use website, or on the MyAvantiGas portal. Still need to register?
