

# How to be more energy efficient this winter!

Here at AvantiGas we want to make sure that everybody is fully prepared for the colder months. Below we have provided you with some tips on how to stay warm whilst saving some money and being more efficient with your energy supply!

## Here's some tips!

### Adjusting your thermostat

Turning it down by even just 1°C could knock up to 10% off your heating bills!

### Block out any draughts

To block any draughts that may be coming through your windows or doors, use draughtproof strips or draught excluders to block the cold from entering

### Switch to LED bulbs

They use 80% less electricity than traditionals and will last longer too.

### Opt for A-rated appliances

They are more energy efficient! To find these look for labels that show an 'A' rate or an Energy Saving Trust Recommended label!

### Do not fill your kettle!

A kettle, when full, is one of top appliances in terms of energy usage! So only fill the kettle with how much water you actually need!

### Bleed your radiators!

Doing this will remove any trapped air inside which can cause parts of the radiator not to heat up.

### Switch off!

Instead of leaving your appliances on standby, turn them off! This is a standard tip, but it helps!

### Get your boiler serviced!

To ensure it is in tip-top condition, get it checked regularly by a Gas Safe Registered Engineer.

### Wash your clothes on a cooler setting

Make the most out of your washing load too by filling up the machine!
