

Your winter checklist!

Update contact details

This will allow us to provide you with the important information that you will need throughout winter.

A regular gauge reading

You are obliged to provide this every 4 weeks, so we can provide an accurate supply to you.

Failing to do so may cause you to have shortages, which unfortunately can take slightly longer to resolve during peak-times.

Check balance

You can do this via your 'MyAvantiGas' account. It is essential that you monitor this regularly to avoid any issues.

Care for your tank!

During the colder weather, it is important to make sure that you have taken care of your tank in time for your delivery. Check out our winter help page to see how you can do so!

If your tank has not been cared for, drivers may not be able to complete the delivery.

Boiler check!

Time for your annual LPG appliance service and safety check! This needs to be completed by a qualified gas safe registered engineer. Click [here](#) to find your local engineers!

Check your smoke and carbon monoxide alarms!

There are now new requirements for smoke and carbon monoxide alarms, which came into force on the 1st October 2022.

Click [here](#) to make sure you are following the new requirements.
